Foreword	xi
Francesca BOVOLO	
Chapter 1. Broader Application of the Time-SIFT Method: Proof-of-Concept of 3-D-Monitoring Study Cases with Various Spatiotemporal Scales.	1
Denis FEURER, Sean BEMIS, Guillaume COULOUMA, Hatem MABROUK, Sylvain MASSUEL, Romina Vanessa BARBOSA, Yoann THOMAS, Jérôme AMMANN and Fabrice VINATIER	
1.1. Introduction.	1
1.2. The Time-SIFT method.	4
1.2.1. General principle	4
1.2.2. Existing methods for multi-temporal photogrammetric processing	5
1.2.3. Step-by-step description of the Time-SIFT implementation.	7
1.3. Case studies.	8
1.3.1. La Peyne	9
1.3.2. Mount Rainier	14
1.3.3. Mornag's orchard	22
1.3.4. Soil bulk density	25
1.3.5. Benthic species in rocky shore	29
1.3.6. Test cases synthesis.	33
1.4. Conclusion	34
1.5. References	35

Chapter 2. Hierarchical Crop Mapping from Satellite Image Sequences with Recurrent Neural Networks	41
Mehmet OZGUR TURKOGLU, Stefano D'ARONCO, Konrad SCHINDLER and Jan Dirk WEGNER	
2.1. Introduction.	41
2.2. Literature	44
2.3. Background: sequence modeling with recurrent neural networks	49
2.3.1. Convolutional recurrent neural networks	50
2.3.2. Deep multi-layer RNNs	52
2.4. Hierarchical multi-stage convolutional recurrent network	54
2.4.1. Label refinement	55
2.4.2. Implementation details	56
2.5. Experiment	57
2.5.1. Dataset	57
2.5.2. Crop class hierarchy	57
2.5.3. Baselines and evaluation.	60
2.5.4. Performance comparison	61
2.5.5. Ablation study	65
2.5.6. Simultaneous multi-level classification	66
2.5.7. Cloud robustness	68
2.6. Summary and future outlook.	69
2.7. References	72
Chapter 3. Exploiting Multitemporal Multispectral High-resolution Satellite Data toward Annual Land Cover and Crop Type Mapping: A Case Study in Greece	81
Christina KARAKIZI, Konstantinos KARANTZALOS and Zacharias KANDYLAKIS	
3.1. Introduction.	81
3.2. From raw data to analysis ready datasets	83
3.2.1. Availability of analysis ready data	85
3.2.2. Atmospheric correction	86
3.2.3. Directional effects and BRDF correction	88
3.2.4. Cloud and shadow detection	89
3.2.5. Geometric alignment and geolocation accuracy	93
3.2.6. Temporal gap-filling, composites and interpolated time series	94

3.3. Classification and mapping	96
3.3.1. Reference data	97
3.3.2. Classification units and classifiers	99
3.3.3. Classification features	101
3.3.4. Accuracy assessment	102
3.3.5. Benchmarking classification features and stratification strategies	104
3.4. Data handling and computational challenges	110
3.5. Conclusions.	112
3.6. Acknowledgments.	114
3.7. References	114
Chapter 4. Irrigation Monitoring Using High Spatial and Temporal Resolutions Remote Sensing Time Series.	123
Hassan BAZZI and Nicolas BAGHDADI	
4.1. Introduction.	123
4.2. Fundamentals behind remote sensing for irrigation mapping	125
4.2.1. Optical remote sensing for irrigation mapping	125
4.2.2. SAR remote sensing for irrigation mapping	128
4.3. New methodologies for irrigation mapping using S1 and S2 time series	131
4.3.1. Decision tree algorithm for detecting irrigation events	131
4.3.2. Machine learning algorithms for mapping irrigated areas	135
4.3.3. Operational semi-supervised method for mapping irrigated areas.	138
4.4. Limits and perspectives.	142
4.4.1. Limits for irrigation mapping and irrigation detection using remote sensing time series	142
4.4.2. Perspectives in irrigation mapping using remote sensing time series data	144
4.5. Conclusions.	145
4.6. References	146
Chapter 5. Trends in Satellite Time Series Processing for Vegetation Phenology Monitoring	151
Santiago BELDA, Luca PIPIA and Jochem VERRELST	
5.1. Introduction.	152
5.2. Time series processing for gap filling	154
5.2.1. Gap-filling methods	154

5.2.2. Assessment of gap-filling methods.	156
5.3. Time series processing for phenology indicators estimation	161
5.4. Fusion of time series products for improved gap filling.	163
5.4.1. MOGPR modeling	164
5.4.2. MOGPR assessment	166
5.4.3. MOGPR generalization	168
5.5. Time series processing toolbox: DATimeS	170
5.6. Discussion	173
5.7. Conclusions.	176
5.8. Acknowledgments.	177
5.9. References	177
Chapter 6. Data-Driven Spatio-Temporal Interpolation for Satellite-Derived Geophysical Tracers	185
Maxime BEAUCHAMP and Ronan FABLET	
6.1. Notations	185
6.2. Introduction.	186
6.3. Data assimilation	188
6.3.1. Introduction	188
6.3.2. Variational versus statistical DA	189
6.4. Data-driven methods	196
6.4.1. DINEOF schemes.	196
6.4.2. Analog data assimilation.	200
6.4.3. Neural network-based Kalman filters	203
6.4.4. Variational end-to-end learning-based methods	206
6.5. Application to satellite-derived ocean surface topography datasets	210
6.6. Conclusion and discussion	216
6.7. References	218
Chapter 7. Recent Advances in Tropical Cyclone Forecasting Using Machine Learning on Reanalysis and Remote Sensing	223
Sophie GIFFARD-ROISIN	
7.1. Background.	224
7.1.1. Problem statement	224
7.1.2. Existing TC forecasts methods	225
7.1.3. Available data	226
7.1.4. Machine learning background	227

7.2. Handling spatiotemporal data for TC forecasting	229
7.2.1. Temporal feature structure: time series versus fixed time steps inputs	229
7.2.2. Spatial feature structure: fixed versus moving frame of reference	230
7.2.3. Combining different input data types	230
7.3. Application 1: intensity forecasting from spatiotemporal reanalysis, a hackathon experiment	231
7.3.1. Data and pipeline	232
7.3.2. Methods used by the participants.	233
7.3.3. Results	234
7.4. Application 2: trajectory forecasting using fused deep learning	236
7.4.1. Data processing	236
7.4.2. Methodology: a Deep Fusion Model.	238
7.4.3. Experimental evaluation	239
7.5. Applications using recurrent neural networks—convolutional neural networks	242
7.5.1. A hybrid CNN-LSTM model	243
7.5.2. An attention recurrent CNN model.	245
7.6. Applications using remote sensing data	246
7.6.1. Deep learning intensity forecasting using microwave remote sensing	246
7.6.2. Deep learning intensity and wind structure forecasting using infrared remote sensing.	247
7.7. Conclusion, current limitations and open problems	247
7.8. References	248
List of Authors	253
